## RESUMO

Descreveu-se a presença do propósito de vida em um grupo de idosos praticantes de atividade física antes e durante a pandemia por Covid-19 no interior do Amazonas. Estudo longitudinal realizado com 63 idosos que residem no município de Coari/AM. Avaliou-se as características sociodemográficas e de saúde e o bem-estar e direcionamento de vida por meio do questionário de propósito de vida. Durante a pandemia por Covid-19 os idosos diminuíram a percepção do propósito de vida ainda assim, ao avaliar a saúde e propósito de vida, de maneira geral os idosos relataram alegria e satisfação com a vida.

**Palavras chaves:** Idosos; Metas organizacionais; Bem-estar; COVID-19; Atividade Física.

## ABSTRACT

*The presence of the purpose of life was described in a group of elderly practitioners of physical activity before and during the Covid-19 pandemic in the interior of Amazonas. Longitudinal study carried out with 63 elderly people residing in the city of Coari/AM. Sociodemographic and health characteristics and well-being and direction of life were evaluated through the purpose of life questionnaire. During the Covid-19 pandemic, the elderly reduced their perception of life purpose, yet, when evaluating health and life purpose, in general, the elderly reported joy and satisfaction with life.*

**Keywords:** Elderly; Organizational goals; Welfare; COVID-19; Physical activity.

## RESUMEN

*Se describió la presencia del propósito de vida en un grupo de ancianos practicantes de actividad física antes y durante la pandemia de la Covid-19 en el interior de Amazonas. Estudio longitudinal realizado con 63 ancianos residentes en la ciudad de Coari/AM. Se evaluaron características sociodemográficas, de salud y bienestar y dirección de vida a través del cuestionario de propósito de vida. Durante la pandemia de Covid-19, los ancianos redujeron su percepción del propósito de vida, sin embargo, al evaluar la salud y el propósito de vida, en general, los ancianos relataron alegría y satisfacción con la vida.*

**Palabras llave:** Anciano; Metas organizacionales; Bienestar; COVID-19; Actividad física.

## 1. Introdução

Estima-se que a população idosa mundial até 2050 será composta por 2 bilhões de indivíduos, o que representa 22% da população com 60 anos ou mais. (UNITED NATIONS, 2019) No Brasil, segundo o Censo Populacional de 2019 os idosos representam 13,5% da população, e projeções indicam que essa quantia vai saltar para 24,5% em duas décadas e meia. (IBGE, 2019) Assim, em um panorama geral, a população brasileira no ano de 2060 chegará a mais de 58 milhões de pessoas, e 32 milhões desses indivíduos serão idosos. (Alexandrino et al., 2020)

No Estado do Amazonas o número de idosos de 2005 para 2015 aumentou, de 9,8% para 14,3%. (IBGE, 2016) Em Coari, município localizado a 363km da capital de Manaus, os idosos são compostos por 5,3% da população total (IBGE, 2010) onde tal cenário fez-se atentar a cuidados voltados e conduzidos a este público, fim de promover envelhecimento saudável com uma melhor qualidade de vida e longevidade. (da Costa et al., 2020)

Tendo em vista a longevidade, é importante entender que os idosos passam por modificações dinâmicas e progressivas tanto fisiológica quanto funcionais. (Simeão et al., 2018) Assim, para envelhecer de forma saudável é necessário conquistar com um conjunto de hábitos.

A prática de atividades físicas é o principal hábito adotado como forma de promoção a saúde, prevenção de doenças e reabilitação, proporcionando o resgate da autonomia, da saúde mental e funcional, maior senso de propósito de vida e aumento da longevidade em idosos. (Crochemore-Silva et al., 2020)

O senso de propósito de vida pode ser entendido como a capacidade de percepção sobre o direcionamento da própria vida. Um estudo mostrou que idosos com forte senso de propósito de vida são capazes de estabelecer metas para si, tem desejos e vontades para viver a cada dia, sentem que sua vida passada e atual é significativa, e são ativas na execução de planos de estabelecem para si mesmo. (Ribeiro et al., 2018a)

A pandemia causada pelo Coronavírus-19, com início no Brasil em 2020, pode ter impactado o propósito de vida dos idosos, a partir das medidas adotadas pelas autoridades sanitárias com objetivo de barrar a disseminação do SARS-Cov-2. (Nunes et al., 2020) Uma das medidas consideradas mais impactantes na vida dos

idosos foi o distanciamento social, conduzido como um isolamento social para grupos de alto risco, como os idosos. Este isolamento modificou diretamente a qualidade de vida, bem-estar, saúde mental, número de comorbidades, e sedentarismo dos idosos. (Mills et al., 2020)

A partir deste contexto, o presente estudo teve como objetivo analisar o propósito de vida em um grupo de idosos praticantes de atividade física antes e durante a pandemia por Covid-19 no interior do Amazonas.

## **2. Método**

Estudo longitudinal, observacional, com análise de dois momentos de coleta: momento 1 (M1) e momento 2 (M2). O M1 foi realizado no segundo semestre de 2019 até fevereiro de 2020; e o M2 no segundo semestre de 2021 (após a vacinação – Covid19) até fevereiro de 2022.

A população do estudo consiste em idosos que residem no município de Coari no interior do Estado do Amazonas e que praticam atividade física em grupo. A amostra foi composta por 66 idosos, indivíduos com idade igual ou superior a 60 anos, de ambos os sexos. Não puderam participar idosos com doenças cardiovasculares e com incapacidade cognitiva em responder à bateria de avaliação.

O recrutamento ocorreu em alguns locais específicos da cidade de Coari como: praças de esporte, centro do idoso, estrada do aeroporto e nos locais que os idosos realizavam a prática de exercícios físicos. Para participar do estudo os idosos deveriam ter disponibilidade de 1 hora e meia para participar da avaliação gerontológica por meio de questionários.

Avaliou-se as características sociodemográficas como idade (em categorias de 60-69, 70-79, 80-89 e 90 ou mais anos), sexo (homens e mulheres), escolaridade (classificada de acordo com Ministério de Educação do Brasil). Foram avaliadas também características referentes ao uso de medicamentos e respectiva classificação, e visão e audição auto-referida.

Para avaliação do bem-estar e direcionamento de vida aplicou-se o questionário de propósito de vida adaptado para versão brasileira da Escala de Propósito de Vida (PV) de (Ryff and Keyes, 1995) validada e utilizada com idosos no Brasil. (Ribeiro et al., 2018b) A escala possui 10 itens que contém 6 alternativas de

única escolha: concordo totalmente (5); concordo (4); concordo parcialmente (3); discordo parcialmente (2); discordo (1); discordo totalmente (0).

Cada alternativa é classificada pelo avaliado de acordo com o grau de concordância com cada afirmação. E para realização do cálculo final é necessário reverter o escore negativamente para as perguntas (2, 3, 5, 6 e 10) e a obtenção da pontuação final é resultado da média das 10 questões (soma/10) que pode variar de 1 a 5, sendo que escores altos representam maiores níveis de propósito de vida. (Ribeiro et al., 2018b)

Os dados coletados foram organizados em planilha eletrônica no programa Excel 2020 para posterior análise, sendo que cada idoso recebeu um código de identificação pra garantir a confidencialidade das informações. Para caracterização sociodemográfica e das informações sobre medicamentos, visão e audição foi realizada análise descritiva com uso de frequência absoluta e relativa. Foi verificada a normalidade dos dados por meio do teste de Shapiro Wilk. Para análise comparativa do propósito de vida no M1 e M2 foi utilizado o teste T de *Student* para amostras pareadas e dados paramétricos. As análises foram realizadas no software estatístico IBM/Stata MP versão 14.0.

Este estudo teve aprovação do Comitê de Ética em Pesquisa da Universidade Federal do Amazonas - UFAM sob o registro de número CAEE: CAEE 08021419.2.0000.5020. Todos os participantes receberam as informações e processo de avaliação do estudo, e assinaram o Termo de Consentimento Livre e Esclarecido (TCLE) que garantia o sigilo das informações coletadas.

Pelo contexto da pandemia, a coleta dos dados foi realizada com uso de materiais de biossegurança para proteção do entrevistador e do idoso.

### **3. Resultados**

A população estudada foi composta por 66 idosos no M1, porém houve perda de 3 idosos por óbito por Covid-19. Houve predomínio o sexo feminino, nasceram no interior do Amazonas, são aposentados e vivem com uma renda mensal de até um salário mínimo (Tabela 1).

#### 4. Discussão

A maioria das idosas praticantes de atividade física que apresentaram propósito de vida são mulheres assim como o estudo transversal realizado com 36 idosas praticantes de atividade física no município de Coari que era composto por

mulheres analfabetas e aposentadas, morando com algum familiar. (Duarte et al., 2020) A literatura demonstra que mulheres idosas sempre buscam por meio da prática de atividade física o seu estado de saúde, bem-estar e a percepção que para ter uma boa qualidade de vida é necessário por meio desta prática, buscar e adotar hábitos de vida saudáveis. (Batista et al., 2012)

Quanto à ocupação, a maioria das idosas desse estudo são aposentadas assim como o estudo de (Pieczyńska et al., 2019) realizado na Polônia que apontou a predominância de idosas aposentadas que realizam a prática de atividade física regular. Em virtude disso, a população idosa está a cada dia mais longeva devido aos hábitos de vida ativo e saudável, trazendo ao fato a queda da taxa de mortalidade desses idosos, e gerando um potencial desafiador para sustentabilidade financeira dos sistemas de proteção da sociedade que é a aposentadoria. (Godinho and Ferreira, 2017)

Quanto a renda mensal apresentada pelos idosos deste estudo, a maioria vive com menos de um salário-mínimo. Para (Ribeiro et al., 2018c) idosos que tem uma boa condição socioeconômica apresenta um melhor propósito de vida, pois quanto maior a escolaridade melhor o bem-estar psicológico desse idoso, o mesmo se propõe a usar todas as suas capacidades funcionais para atingir metas e objetivos pessoais. Estes dados corroboram ao estudo, pois identificou-se que os idosos que obtiveram uma diminuição do propósito de vida durante a pandemia apresentaram perfis sociodemográficos a baixa renda e baixa escolaridade.

Quanto a baixa escolaridade ou analfabetismo apresentado pela maioria dos idosos deste estudo, deve-se ao fato da educação não ser considerada como prioridade, como o trabalho. Para Gomes et al. (2001) a prática da atividade física pelos idosos, principalmente as mulheres, alfabetizadas ou que apresentam escolaridade é realizada de maneira assídua e regular, o que difere aos achados deste estudo, tendo em vista que a baixa escolaridade não foi empecilho para a realização da prática regular de atividades física neste grupo de idosos.

A maioria dos idosos relataram morar com algum familiar (esposo ou filhos) e este resultado é semelhante ao estudo longitudinal realizado no Brasil onde mostra que maior parte dos idosos aposentados residem na companhia de algum familiar. (Confortin et al., 2017) Isso ocorre porque idosos que moram acompanhados são indivíduos que apresentam incapacidades físicas advindas de dificuldades em

realizações de atividades básicas de vida diária, sendo assim necessário o suporte e auxílio de alguém para dar apoio e cuidado a estas questões. (Negrini et al., 2018)

As idosas desse estudo consomem de duas a quatro medicações, tendo como prevalência o uso de anti-hipertensivos, esse dado é semelhante ao estudo conduzido durante os anos de 2008 a 2012 em Ribeirão Preto no Brasil com idosos que fazem uso de duas medicações por dia, tendo como medicamento mais consumindo os anti-hipertensivos. (Oliveira et al., 2021) Esse achado nos remete que os idosos durante a pandemia do Covid-19 redobram o uso de medicamentos anti-hipertensivos, haja visto que essa população tinham uma maior probabilidade de ser acometido com o vírus, desenvolvendo quadro clínico grave da Covid-19 em idosos com a pressão arterial descontrolada. (Santos et al., 2021)

Parte dos idosos deste estudo relataram apresentar péssima visão. Melo et al. (2018) em seu estudo realizado com idosos da zona sul do município de Patos/PB observou que a qualidade da visão dentre a idade de 60 a 69 anos é comum de apresentar alterações. Já (Barbosa et al., 2017) afirma que a dificuldade apresentada pelos idosos em ver objetos próximos ou longe, ou até mesmo a dificuldade de leitura, é porque há uma alteração ocular significativa decorrente do processo de envelhecimento, favorecendo assim a degeneração macular, acarretando prejuízos na qualidade de vida da pessoa idosa.

Os idosos desse estudo apontaram ter boa audição diferente do que (Mick et al., 2018) mostram, visto que há perda auditiva em idosos que moram sozinhos. De acordo com (Camargo et al., 2018) a audição é uma das alterações que ocorrem fisiologicamente com o decorrer da idade, e esta diminui o contato social do idoso, afetando a autoestima e gerando isolamento social.

Quanto aos achados sobre o propósito de vida, nesse estudo os idosos apresentaram uma queda na pontuação durante a pandemia, quando comparado as pontuações antes da pandemia. Isto se destaca quando se questiona sobre os planejamentos de metas, crescimento pessoal e nas realizações de atividades diárias. De acordo com (Kang et al., 2021) o propósito de vida funciona como um recurso psicológico no amortecimento da solidão para os idosos, demonstram um forte senso de propósito de vida durante a pandemia por Covid-19 e foram capazes de desenvolver estratégias positivas de enfrentamento a longo prazo.

Segundo (Romero et al., 2021) o propósito de vida do idoso foi impactado na pandemia por covid-19 porque carreteou muitos transtornos como o distanciamento social, uma perda de rendimento familiar, a desigualdade social e de saúde acarretando distúrbios psicossociais como sentimento frequente de solidão pelo distanciamento dos amigos e familiares na pandemia, o sentimento de isolamento de familiares e amigos esteve relacionado à tristeza e depressão na população idosa, gerando desesperança e afetando diretamente na maneira que o idoso enxergava o mundo.

## 5. Conclusão

Os idosos praticantes de atividade física no interior do Amazonas, mesmo apresentando fragilidades vivenciadas durante a pandemia por Covid-19 possuem presença de propósito de vida que foi impactado durante a pandemia prejudicando-os no estabelecimento de projetos futuros, objetivos alcançáveis, direção, sentido de vida, autoestima e motivação para viver.

### DESCRIPTION

*Experimental Gerontology* is a multidisciplinary journal for the publication of work from all areas of **biogerontology**, with an emphasis on studies focused at the systems level of investigation, such as whole organisms (e.g. invertebrate genetic models), immune, endocrine and cellular systems, as well as whole population studies (e.g. epidemiology).

The journal also publishes studies into the **behavioural** and **cognitive** consequences of **aging**, where a clear biological causal link is implicated. Studies aimed at bridging the gap between basic and clinical aspects of **gerontology**, such as papers on the basic aspects of **age-related diseases**, are welcomed, as is research orientated toward the modulation of the **aging process**. Original research manuscripts, special issues, short reports, reviews, mini-reviews, and correspondence are published. Manuscripts on social aspects of aging and reports on clinical studies do not fall within the scope of the journal.

### AUDIENCE

Gerontologists, Biological Scientists, Immunologists, Endocrinologists, Neuroscientists, Pathologists, Nutritionists

### IMPACT FACTOR

2021: 4.253 © Clarivate Analytics Journal Citation Reports 2022

### ABSTRACTING AND INDEXING

## GUIDE FOR AUTHORS

---

### Your Paper Your Way

We now differentiate between the requirements for new and revised submissions. You may choose to submit your manuscript as a single Word or PDF file to be used in the refereeing process. Only when your paper is at the revision stage, will you be requested to put your paper in to a 'correct format' for acceptance and provide the items required for the publication of your article.

**To find out more, please visit the Preparation section below.**

### Submission checklist

You can use this list to carry out a final check of your submission before you send it to the journal for review. Please check the relevant section in this Guide for Authors for more details.

Ensure that the following items are present:

One author has been designated as the corresponding author with contact details:

- E-mail address
- Full postal address

All necessary files have been uploaded:

*Manuscript:*

- Include keywords
  - All figures (include relevant captions)
  - All tables (including titles, description, footnotes)
  - Ensure all figure and table citations in the text match the files provided
  - Indicate clearly if color should be used for any figures in print
- Graphical Abstracts / Highlights files (where applicable) Supplemental files (where applicable)*

Further considerations

- Manuscript has been 'spell checked' and 'grammar checked'
- All references mentioned in the Reference List are cited in the text, and vice versa
- Permission has been obtained for use of copyrighted material from other sources (including the Internet)
- A competing interests statement is provided, even if the authors have no competing interests to declare
- Journal policies detailed in this guide have been reviewed
- Referee suggestions and contact details provided, based on journal requirements

For further information, visit our [Support Center](#).

**BEFORE YOU BEGIN**

### Ethics in publishing

Please see our information on [Ethics in publishing](#).

### Declaration of interest

All authors must disclose any financial and personal relationships with other people or organizations that could inappropriately influence (bias) their work. Examples of potential competing interests include employment, consultancies, stock ownership, honoraria, paid expert testimony, patent applications/registrations, and grants or other funding. Authors must disclose any interests in two places: 1. A summary declaration of interest statement in the title page file (if double anonymized) or the manuscript file (if single anonymized). If there are no interests to declare then please state this: 'Declarations of interest: none'. 2. Detailed disclosures as part of a separate Declaration of Interest form, which forms part of the journal's official records. It is important for potential interests to be declared in both places and that the information matches. [More information](#).

### Submission declaration and verification

Submission of an article implies that the work described has not been published previously (except in the form of an abstract, a published lecture or academic thesis, see [Multiple, redundant or concurrent](#)

[publication'](#) for more information), that it is not under consideration for publication elsewhere, that its publication is approved by all authors and tacitly or explicitly by the responsible authorities where

the work was carried out, and that, if accepted, it will not be published elsewhere in the same form, in English or in any other language, including electronically without the written consent of the copyright-holder. To verify compliance, your article may be checked by [Crossref Similarity Check](#) and other originality or duplicate checking software.

#### *Preprints*

Please note that [preprints](#) can be shared anywhere at any time, in line with Elsevier's [sharing policy](#). Sharing your preprints e.g. on a preprint server will not count as prior publication (see '[Multiple, redundant or concurrent publication](#)' for more information).

#### [Use of inclusive language](#)

Inclusive language acknowledges diversity, conveys respect to all people, is sensitive to differences, and promotes equal opportunities. Content should make no assumptions about the beliefs or commitments of any reader; contain nothing which might imply that one individual is superior to another on the grounds of age, gender, race, ethnicity, culture, sexual orientation, disability or health condition; and use inclusive language throughout. Authors should ensure that writing is free from bias, stereotypes, slang, reference to dominant culture and/or cultural assumptions. We advise to seek gender neutrality by using plural nouns ("clinicians, patients/clients") as default/wherever possible to avoid using "he, she," or "he/she." We recommend avoiding the use of descriptors that refer to personal attributes such as age, gender, race, ethnicity, culture, sexual orientation, disability or health condition unless they are relevant and valid. When coding terminology is used, we recommend to avoid offensive or exclusionary terms such as "master", "slave", "blacklist" and "whitelist". We suggest using alternatives that are more appropriate and (self-) explanatory such as "primary", "secondary", "blocklist" and "allowlist". These guidelines are meant as a point of reference to help identify appropriate language but are by no means exhaustive or definitive.

#### [Author contributions](#)

For transparency, we encourage authors to submit an author statement file outlining their individual contributions to the paper using the relevant CRediT roles: Conceptualization; Data curation; Formal analysis; Funding acquisition; Investigation; Methodology; Project administration; Resources; Software; Supervision; Validation; Visualization; Roles/Writing - original draft; Writing - review & editing. Authorship statements should be formatted with the names of authors first and CRediT role(s) following. [More details and an example](#).

#### [Changes to authorship](#)

Authors are expected to consider carefully the list and order of authors **before** submitting their manuscript and provide the definitive list of authors at the time of the original submission. Any addition, deletion or rearrangement of author names in the authorship list should be made only **before** the manuscript has been accepted and only if approved by the journal Editor. To request such a change, the Editor must receive the following from the **corresponding author**: (a) the reason for the change in author list and (b) written confirmation (e-mail, letter) from all authors that they agree with the addition, removal or rearrangement. In the case of addition or removal of authors, this includes confirmation from the author being added or removed.

Only in exceptional circumstances will the Editor consider the addition, deletion or rearrangement of authors **after** the manuscript has been accepted. While the Editor considers the request, publication of the manuscript will be suspended. If the manuscript has already been published in an online issue, any requests approved by the Editor will result in a corrigendum.

#### *Article transfer service*

This journal uses the Elsevier Article Transfer Service to find the best home for your manuscript. This means that if an editor feels your manuscript is more suitable for an alternative journal, you might be asked to consider transferring the manuscript to such a journal. The recommendation might be provided by a Journal Editor, a dedicated [Scientific Managing Editor](#), a tool assisted recommendation, or a combination. If you agree, your manuscript will be transferred, though you will have the opportunity to make changes to the manuscript before the submission is complete. Please note that your manuscript will be independently reviewed by the new journal. [More information](#).

#### [Copyright](#)

Upon acceptance of an article, authors will be asked to complete a 'Journal Publishing Agreement' (see [more information](#) on this). An e-mail will be sent to the corresponding author confirming receipt of the manuscript together with a 'Journal Publishing Agreement' form or a link to the online version of this agreement.

Subscribers may reproduce tables of contents or prepare lists of articles including abstracts for internal circulation within their institutions. [Permission](#) of the Publisher is required for resale or distribution outside the institution and for all other derivative works, including compilations and translations. If excerpts from other copyrighted works are included, the author(s) must obtain written permission from the copyright owners and credit the source(s) in the article. Elsevier has [preprinted forms](#) for use by authors in these cases.

For gold open access articles: Upon acceptance of an article, authors will be asked to complete a 'License Agreement' ([more information](#)). Permitted third party reuse of gold open access articles is determined by the author's choice of [user license](#).

### **Author rights**

As an author you (or your employer or institution) have certain rights to reuse your work. [More information](#).

*Elsevier supports responsible sharing*

Find out how you can [share your research](#) published in Elsevier journals.

### **Role of the funding source**

You are requested to identify who provided financial support for the conduct of the research and/or preparation of the article and to briefly describe the role of the sponsor(s), if any, in study design; in the collection, analysis and interpretation of data; in the writing of the report; and in the decision to submit the article for publication. If the funding source(s) had no such involvement, it is recommended to state this.

### **Open access**

Please visit our [Open Access page](#) for more information.

*Elsevier Researcher Academy*

[Researcher Academy](#) is a free e-learning platform designed to support early and mid-career researchers throughout their research journey. The "Learn" environment at Researcher Academy offers several interactive modules, webinars, downloadable guides and resources to guide you through the process of writing for research and going through peer review. Feel free to use these free resources to improve your submission and navigate the publication process with ease.

*Language (usage and editing services)*

Please write your text in good English (American or British usage is accepted, but not a mixture of these). Authors who feel their English language manuscript may require editing to eliminate possible grammatical or spelling errors and to conform to correct scientific English may wish to use the [English Language Editing service](#) available from Elsevier's Author Services.

### **Submission**

Our online submission system guides you stepwise through the process of entering your article details and uploading your files. The system converts your article files to a single PDF file used in the peer-review process. Editable files (e.g., Word, LaTeX) are required to typeset your article for final publication. All correspondence, including notification of the Editor's decision and requests for revision, is sent by e-mail.

*Suggesting reviewers*

Please submit the names and institutional e-mail addresses of several potential reviewers.

You should not suggest reviewers who are colleagues, or who have co-authored or collaborated with you during the last three years. Editors do not invite reviewers who have potential competing interests with the authors. Further, in order to provide a broad and balanced assessment of the work, and ensure scientific rigor, please suggest diverse candidate reviewers who are located in different countries/regions from the author group. Also consider other diversity attributes e.g. gender, race and ethnicity, career stage, etc. Finally, you should not include existing members of the journal's editorial team, of whom the journal are already aware.

Note: the editor decides whether or not to invite your suggested reviewers.

## **PREPARATION**

## Queries

For questions about the editorial process (including the status of manuscripts under review) or for technical support on submissions, please visit our [Support Center](#).

## NEW SUBMISSIONS

Submission to this journal proceeds totally online and you will be guided stepwise through the creation and uploading of your files. The system automatically converts your files to a single PDF file, which is used in the peer-review process.

As part of the Your Paper Your Way service, you may choose to submit your manuscript as a single file to be used in the refereeing process. This can be a PDF file or a Word document, in any format or layout that can be used by referees to evaluate your manuscript. It should contain high enough quality figures for refereeing. If you prefer to do so, you may still provide all or some of the source files at the initial submission. Please note that individual figure files larger than 10 MB must be uploaded separately.

### *References*

There are no strict requirements on reference formatting at submission. References can be in any style or format as long as the style is consistent. Where applicable, author(s) name(s), journal title/book title, chapter title/article title, year of publication, volume number/book chapter and the article number or pagination must be present. Use of DOI is highly encouraged. The reference style used by the journal will be applied to the accepted article by Elsevier at the proof stage. Note that missing data will be highlighted at proof stage for the author to correct.

### *Formatting requirements*

There are no strict formatting requirements but all manuscripts must contain the essential elements needed to convey your manuscript, for example Abstract, Keywords, Introduction, Materials and Methods, Results, Conclusions, Artwork and Tables with Captions.

If your article includes any Videos and/or other Supplementary material, this should be included in your initial submission for peer review purposes.

Divide the article into clearly defined sections.

### *Figures and tables embedded in text*

Please ensure the figures and the tables included in the single file are placed next to the relevant text in the manuscript, rather than at the bottom or the top of the file. The corresponding caption should be placed directly below the figure or table.

## Peer review

This journal operates a single anonymized review process. All contributions will be initially assessed by the editor for suitability for the journal. Papers deemed suitable are then typically sent to a minimum of two independent expert reviewers to assess the scientific quality of the paper. The Editor is responsible for the final decision regarding acceptance or rejection of articles. The Editor's decision is final. Editors are not involved in decisions about papers which they have written themselves or have been written by family members or colleagues or which relate to products or services in which the editor has an interest. Any such submission is subject to all of the journal's usual procedures, with peer review handled independently of the relevant editor and their research groups. [More information on types of peer review](#).

## REVISED SUBMISSIONS

### *Use of word processing software*

Regardless of the file format of the original submission, at revision you must provide us with an editable file of the entire article. Keep the layout of the text as simple as possible. Most formatting codes will be removed and replaced on processing the article. The electronic text should be prepared in a way very similar to that of conventional manuscripts (see also the [Guide to Publishing with Elsevier](#)). See also the section on Electronic artwork.

To avoid unnecessary errors you are strongly advised to use the 'spell-check' and 'grammar-check' functions of your word processor.

## Article structure

### *Subdivision - numbered sections*

Divide your article into clearly defined and numbered sections. Subsections should be numbered

1.1 (then 1.1.1, 1.1.2, ...), 1.2, etc. (the abstract is not included in section numbering). Use this numbering also for internal cross-referencing: do not just refer to 'the text'. Any subsection may be given a brief heading. Each heading should appear on its own separate line.

## Introduction

State the objectives of the work and provide an adequate background, avoiding a detailed literature survey or a summary of the results.

## Material and methods

Provide sufficient details to allow the work to be reproduced by an independent researcher. Methods that are already published should be summarized, and indicated by a reference. If quoting directly from a previously published method, use quotation marks and also cite the source. Any modifications to existing methods should also be described.

## Theory/calculation

A Theory section should extend, not repeat, the background to the article already dealt with in the Introduction and lay the foundation for further work. In contrast, a Calculation section represents a practical development from a theoretical basis.

## Results

Results should be clear and concise.

## Discussion

This should explore the significance of the results of the work, not repeat them. A combined Results and Discussion section is often appropriate. Avoid extensive citations and discussion of published literature.

## Conclusions

The main conclusions of the study may be presented in a short Conclusions section, which may stand alone or form a subsection of a Discussion or Results and Discussion section.

## Appendices

If there is more than one appendix, they should be identified as A, B, etc. Formulae and equations in appendices should be given separate numbering: Eq. (A.1), Eq. (A.2), etc.; in a subsequent appendix, Eq. (B.1) and so on. Similarly for tables and figures: Table A.1; Fig. A.1, etc.

## Essential title page information

- **Title.** Concise and informative. Titles are often used in information-retrieval systems. Avoid abbreviations and formulae where possible.
- **Author names and affiliations.** Please clearly indicate the given name(s) and family name(s) of each author and check that all names are accurately spelled. You can add your name between parentheses in your own script behind the English transliteration. Present the authors' affiliation addresses (where the actual work was done) below the names. Indicate all affiliations with a lower-case superscript letter immediately after the author's name and in front of the appropriate address. Provide the full postal address of each affiliation, including the country name and, if available, the e-mail address of each author.
- **Corresponding author.** Clearly indicate who will handle correspondence at all stages of refereeing and publication, also post-publication. This responsibility includes answering any future queries about Methodology and Materials. **Ensure that the e-mail address is given and that contact details are kept up to date by the corresponding author.**
- **Present/permanent address.** If an author has moved since the work described in the article was done, or was visiting at the time, a 'Present address' (or 'Permanent address') may be indicated as a footnote to that author's name. The address at which the author actually did the work must be retained as the main, affiliation address. Superscript Arabic numerals are used for such footnotes.

## Highlights

Highlights are mandatory for this journal as they help increase the discoverability of your article via search engines. They consist of a short collection of bullet points that capture the novel results of your research as well as new methods that were used during the study (if any). Please have a look at the examples here: [example Highlights](#).

Highlights should be submitted in a separate editable file in the online submission system. Please use 'Highlights' in the file name and include 3 to 5 bullet points (maximum 85 characters, including spaces, per bullet point).

## Abstract

A concise and factual abstract is required. The abstract should state briefly the purpose of the research, the principal results and major conclusions. An abstract is often presented separately from the article, so it must be able to stand alone. For this reason, References should be avoided, but if essential, then cite the author(s) and year(s). Also, non-standard or uncommon abbreviations should be avoided, but if essential they must be defined at their first mention in the abstract itself.

### *Graphical abstract*

Although a graphical abstract is optional, its use is encouraged as it draws more attention to the online article. The graphical abstract should summarize the contents of the article in a concise, pictorial form designed to capture the attention of a wide readership. Graphical abstracts should be submitted as a separate file in the online submission system. Image size: Please provide an image with a minimum of 531 × 1328 pixels (h × w) or proportionally more. The image should be readable at a size of 5 × 13 cm using a regular screen resolution of 96 dpi. Preferred file types: TIFF, EPS, PDF or MS Office files. You can view [Example Graphical Abstracts](#) on our information site.

Authors can make use of Elsevier's [Illustration Services](#) to ensure the best presentation of their images and in accordance with all technical requirements.

## Keywords

Immediately after the abstract, provide a maximum of 6 keywords, using American spelling and avoiding general and plural terms and multiple concepts (avoid, for example, 'and', 'of'). Be sparing with abbreviations: only abbreviations firmly established in the field may be eligible. These keywords will be used for indexing purposes.

### *Abbreviations*

Define abbreviations that are not standard in this field in a footnote to be placed on the first page of the article. Such abbreviations that are unavoidable in the abstract must be defined at their first mention there, as well as in the footnote. Ensure consistency of abbreviations throughout the article.

### *Acknowledgements*

Collate acknowledgements in a separate section at the end of the article before the references and do not, therefore, include them on the title page, as a footnote to the title or otherwise. List here those individuals who provided help during the research (e.g., providing language help, writing assistance or proof reading the article, etc.).

### *Formatting of funding sources*

List funding sources in this standard way to facilitate compliance to funder's requirements:

Funding: This work was supported by the National Institutes of Health [grant numbers xxxx, yyyy]; the Bill & Melinda Gates Foundation, Seattle, WA [grant number zzzz]; and the United States Institutes of Peace [grant number aaa].

It is not necessary to include detailed descriptions on the program or type of grants and awards. When funding is from a block grant or other resources available to a university, college, or other research institution, submit the name of the institute or organization that provided the funding.

If no funding has been provided for the research, it is recommended to include the following sentence:

This research did not receive any specific grant from funding agencies in the public, commercial, or not-for-profit sectors.

### *Units*

Follow internationally accepted rules and conventions: use the international system of units (SI). If other units are mentioned, please give their equivalent in SI.

### *Math formulae*

Please submit math equations as editable text and not as images. Present simple formulae in line with normal text where possible and use the solidus (/) instead of a horizontal line for small fractional terms, e.g., X/Y. In principle, variables are to be presented in italics. Powers of e are often more conveniently denoted by exp. Number consecutively any equations that have to be displayed separately from the text (if referred to explicitly in the text).

## Footnotes

Footnotes should be used sparingly. Number them consecutively throughout the article. Many word processors build footnotes into the text, and this feature may be used. Should this not be the case, indicate the position of footnotes in the text and present the footnotes themselves separately at the end of the article.

## Artwork *Electronic*

### *artwork* General points

- Make sure you use uniform lettering and sizing of your original artwork.
- Preferred fonts: Arial (or Helvetica), Times New Roman (or Times), Symbol, Courier.
- Number the illustrations according to their sequence in the text.
- Use a logical naming convention for your artwork files.
- Indicate per figure if it is a single, 1.5 or 2-column fitting image.
- For Word submissions only, you may still provide figures and their captions, and tables within a single file at the revision stage.
- Please note that individual figure files larger than 10 MB must be provided in separate source files.

A detailed [guide on electronic artwork](#) is available.

**You are urged to visit this site; some excerpts from the detailed information are given here.**

## Formats

Regardless of the application used, when your electronic artwork is finalized, please 'save as' or convert the images to one of the following formats (note the resolution requirements for line drawings, halftones, and line/halftone combinations given below):

EPS (or PDF): Vector drawings. Embed the font or save the text as 'graphics'.

TIFF (or JPG): Color or grayscale photographs (halftones): always use a minimum of 300 dpi.

TIFF (or JPG): Bitmapped line drawings: use a minimum of 1000 dpi.

TIFF (or JPG): Combinations bitmapped line/half-tone (color or grayscale): a minimum of 500 dpi is required.

### **Please do not:**

- Supply files that are optimized for screen use (e.g., GIF, BMP, PICT, WPG); the resolution is too low.
- Supply files that are too low in resolution.
- Submit graphics that are disproportionately large for the content.

### *Color artwork*

Please make sure that artwork files are in an acceptable format (TIFF (or JPEG), EPS (or PDF) or MS Office files) and with the correct resolution. If, together with your accepted article, you submit usable color figures then Elsevier will ensure, at no additional charge, that these figures will appear in color online (e.g., ScienceDirect and other sites) in addition to color reproduction in print. [Further information on the preparation of electronic artwork.](#)

### *Figure captions*

Ensure that each illustration has a caption. A caption should comprise a brief title (**not** on the figure itself) and a description of the illustration. Keep text in the illustrations themselves to a minimum but explain all symbols and abbreviations used.

## Tables

Please submit tables as editable text and not as images. Tables can be placed either next to the relevant text in the article, or on separate page(s) at the end. Number tables consecutively in accordance with their appearance in the text and place any table notes below the table body. Be sparing in the use of tables and ensure that the data presented in them do not duplicate results described elsewhere in the article. Please avoid using vertical rules and shading in table cells.

## References

### *Citation in text*

Please ensure that every reference cited in the text is also present in the reference list (and vice versa). Any references cited in the abstract must be given in full. Unpublished results and personal communications are not recommended in the reference list, but may be mentioned in the text. If these references are included in the reference list they should follow the standard reference style of the journal and should include a substitution of the publication date with either 'Unpublished results' or

'Personal communication'. Citation of a reference as 'in press' implies that the item has been accepted for publication.

### *Reference links*

Increased discoverability of research and high quality peer review are ensured by online links to the sources cited. In order to allow us to create links to abstracting and indexing services, such as Scopus, CrossRef and PubMed, please ensure that data provided in the references are correct. Please note that incorrect surnames, journal/book titles, publication year and pagination may prevent link creation. When copying references, please be careful as they may already contain errors. Use of the DOI is highly encouraged.

A DOI is guaranteed never to change, so you can use it as a permanent link to any electronic article. An example of a citation using DOI for an article not yet in an issue is: VanDecar J.C., Russo R.M., James D.E., Ambeh W.B., Franke M. (2003). Aseismic continuation of the Lesser Antilles slab beneath northeastern Venezuela. *Journal of Geophysical Research*, <https://doi.org/10.1029/2001JB000884>. Please note the format of such citations should be in the same style as all other references in the paper.

### *Web references*

As a minimum, the full URL should be given and the date when the reference was last accessed. Any further information, if known (DOI, author names, dates, reference to a source publication, etc.), should also be given. Web references can be listed separately (e.g., after the reference list) under a different heading if desired, or can be included in the reference list.

### *Data references*

**For reference style 2 Harvard:** [dataset] Oguro, M., Imahiro, S., Saito, S., Nakashizuka, T., 2015. Mortality data for Japanese oak wilt disease and surrounding forest compositions. Mendeley Data, v1. <http://dx.doi.org/10.17632/xwj98nb39r.1>.

### *Data references*

This journal encourages you to cite underlying or relevant datasets in your manuscript by citing them in your text and including a data reference in your Reference List. Data references should include the following elements: author name(s), dataset title, data repository, version (where available), year, and global persistent identifier. Add [dataset] immediately before the reference so we can properly identify it as a data reference. The [dataset] identifier will not appear in your published article.

### *Preprint references*

Where a preprint has subsequently become available as a peer-reviewed publication, the formal publication should be used as the reference. If there are preprints that are central to your work or that cover crucial developments in the topic, but are not yet formally published, these may be referenced. Preprints should be clearly marked as such, for example by including the word preprint, or the name of the preprint server, as part of the reference. The preprint DOI should also be provided.

### *References in a special issue*

Please ensure that the words 'this issue' are added to any references in the list (and any citations in the text) to other articles in the same Special Issue.

### *Reference management software*

Most Elsevier journals have their reference template available in many of the most popular reference management software products. These include all products that support [Citation Style Language styles](#), such as [Mendeley](#). Using citation plug-ins from these products, authors only need to select the appropriate journal template when preparing their article, after which citations and bibliographies will be automatically formatted in the journal's style. If no template is yet available for this journal, please follow the format of the sample references and citations as shown in this Guide. If you use reference management software, please ensure that you remove all field codes before submitting the electronic manuscript. [More information on how to remove field codes from different reference management software](#).

### *Reference formatting*

There are no strict requirements on reference formatting at submission. References can be in any style or format as long as the style is consistent. Where applicable, author(s) name(s), journal title/book title, chapter title/article title, year of publication, volume number/book chapter and the article number or pagination must be present. Use of DOI is highly encouraged. The reference style used by the journal will be applied to the accepted article by Elsevier at the proof stage. Note that missing data will be highlighted at proof stage for the author to correct. If you do wish to format the references yourself they should be arranged according to the following examples:

## Reference

### Reference style

Text: Indicate references by first author last name and date of publication in parentheses in line with the text. The actual authors can be referred to, however the complete reference must always be given. Example: 'Barnaby (2001) obtained a different result...'

Reference to a journal publication:

J. van der Geer, J.A.J. Hanraads, R.A. Lupton, 2010. The art of writing a scientific article, *J. Sci. Commun.* 163,51-59.

Reference to a book:

W. Strunk Jr., E.B. White, 2000. *The Elements of Style*, fourth ed., Longman, New York.

Reference to a chapter in an edited book:

G.R. Mettam, L.B. Adams, 2009. How to prepare an electronic version of your article, in: B.S. Jones, R.Z. Smith (Eds.), *Introduction to the Electronic Age*, E-Publishing Inc., New York, 281-304.

### Journal abbreviations source

Journal names should be abbreviated according to the [List of Title Word Abbreviations](#).

## Data visualization

Include interactive data visualizations in your publication and let your readers interact and engage more closely with your research. Follow the instructions [here](#) to find out about available data visualization options and how to include them with your article.

## Supplementary material

Supplementary material such as applications, images and sound clips, can be published with your article to enhance it. Submitted supplementary items are published exactly as they are received (Excel or PowerPoint files will appear as such online). Please submit your material together with the article and supply a concise, descriptive caption for each supplementary file. If you wish to make changes to supplementary material during any stage of the process, please make sure to provide an updated file. Do not annotate any corrections on a previous version. Please switch off the 'Track Changes' option in Microsoft Office files as these will appear in the published version.

## Research data

This journal encourages and enables you to share data that supports your research publication where appropriate, and enables you to interlink the data with your published articles. Research data refers to the results of observations or experimentation that validate research findings. To facilitate reproducibility and data reuse, this journal also encourages you to share your software, code, models, algorithms, protocols, methods and other useful materials related to the project.

Below are a number of ways in which you can associate data with your article or make a statement about the availability of your data when submitting your manuscript. If you are sharing data in one of these ways, you are encouraged to cite the data in your manuscript and reference list. Please refer to the "References" section for more information about data citation. For more information on depositing, sharing and using research data and other relevant research materials, visit the [research data](#) page.

### Data linking

If you have made your research data available in a data repository, you can link your article directly to the dataset. Elsevier collaborates with a number of repositories to link articles on ScienceDirect with relevant repositories, giving readers access to underlying data that gives them a better understanding of the research described.

There are different ways to link your datasets to your article. When available, you can directly link your dataset to your article by providing the relevant information in the submission system. For more information, visit the [database linking page](#).

For [supported data repositories](#) a repository banner will automatically appear next to your published article on ScienceDirect.

In addition, you can link to relevant data or entities through identifiers within the text of your manuscript, using the following format: Database: xxxx (e.g., TAIR: AT1G01020; CCDC: 734053; PDB: 1XFN).

## Data in Brief

You have the option of converting any or all parts of your supplementary or additional raw data into a data article published in *Data in Brief*. A data article is a new kind of article that ensures that your data are actively reviewed, curated, formatted, indexed, given a DOI and made publicly available to all upon publication (watch this [video](#) describing the benefits of publishing your data in *Data in Brief*). You are encouraged to submit your data article for *Data in Brief* as an additional item directly alongside the revised version of your manuscript. If your research article is accepted, your data article will automatically be transferred over to *Data in Brief* where it will be editorially reviewed, published open access and linked to your research article on ScienceDirect. Please note an [open access fee](#) is payable for publication in *Data in Brief*. Full details can be found on the [Data in Brief website](#). Please use [this template](#) to write your *Data in Brief* data article.

### Data statement

To foster transparency, we encourage you to state the availability of your data in your submission. This may be a requirement of your funding body or institution. If your data is unavailable to access or unsuitable to post, you will have the opportunity to indicate why during the submission process, for example by stating that the research data is confidential. The statement will appear with your published article on ScienceDirect. For more information, visit the [Data Statement page](#).

## AFTER ACCEPTANCE

### Online proof correction

To ensure a fast publication process of the article, we kindly ask authors to provide us with their proof corrections within two days. Corresponding authors will receive an e-mail with a link to our online proofing system, allowing annotation and correction of proofs online. The environment is similar to MS Word: in addition to editing text, you can also comment on figures/tables and answer questions from the Copy Editor. Web-based proofing provides a faster and less error-prone process by allowing you to directly type your corrections, eliminating the potential introduction of errors.

If preferred, you can still choose to annotate and upload your edits on the PDF version. All instructions for proofing will be given in the e-mail we send to authors, including alternative methods to the online version and PDF.

We will do everything possible to get your article published quickly and accurately. Please use this proof only for checking the typesetting, editing, completeness and correctness of the text, tables and figures. Significant changes to the article as accepted for publication will only be considered at this stage with permission from the Editor. It is important to ensure that all corrections are sent back to us in one communication. Please check carefully before replying, as inclusion of any subsequent corrections cannot be guaranteed. Proofreading is solely your responsibility.

### Offprints

The corresponding author will, at no cost, receive a customized [Share Link](#) providing 50 days free access to the final published version of the article on [ScienceDirect](#). The Share Link can be used for sharing the article via any communication channel, including email and social media. For an extra charge, paper offprints can be ordered via the offprint order form which is sent once the article is accepted for publication. Both corresponding and co-authors may order offprints at any time via Elsevier's [Author Services](#). Corresponding authors who have published their article gold open access do not receive a Share Link as their final published version of the article is available open access on ScienceDirect and can be shared through the article DOI link.

## AUTHOR INQUIRIES

Visit the [Elsevier Support Center](#) to find the answers you need. Here you will find everything from Frequently Asked Questions to ways to get in touch.

You can also [check the status of your submitted article](#) or find out [when your accepted article will be published](#).
